Gene Therapy Webinar Series

Understanding the Gene Therapy Process and Aftercare is the fourth webinar in an exciting five-part series on gene therapy from NORD in collaboration with the American Society for Gene and Cell Therapy (ASGCT.) Mark your calendar for the final webinar of the series:

- **Life After Gene Therapy -** Wednesday, December 18

Dates subject to change

AMERICAN SOCIETY of GENE & CELL THERAPY

NORD National Organization for Rare Disorders

rarediseases.org

Speakers

Barry Byrne, MD, PhD
Director
UF Powell Gene Therapy Center

Jerry Mendell, MD
Principal Investigator
Center for Gene Therapy,
The Research Institute of Nationwide Children's

AMERICAN SOCIETY of GENE & CELL THERAPY

NORD National Organization for Rare Disorders

rarediseases.org

Gene Therapy Clinical Trial Participation

Barry J. Byrne, MD, PhD
Powell Gene Therapy Center
University of Florida, College Medicine

Disclosures

Chief Medical Advisor – Muscular Dystrophy Association
Member of Pfizer Rare Disease Therapeutic Area Advisory Board
Inventor of AAV technology related to neuromuscular disease and AAV production technology owned by the University of Florida.

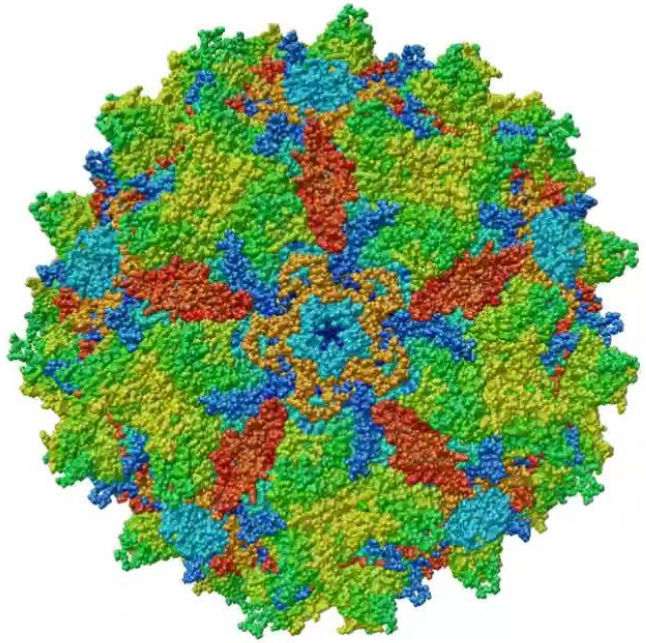
Adeno-Associated Virus (AAV) Vectors



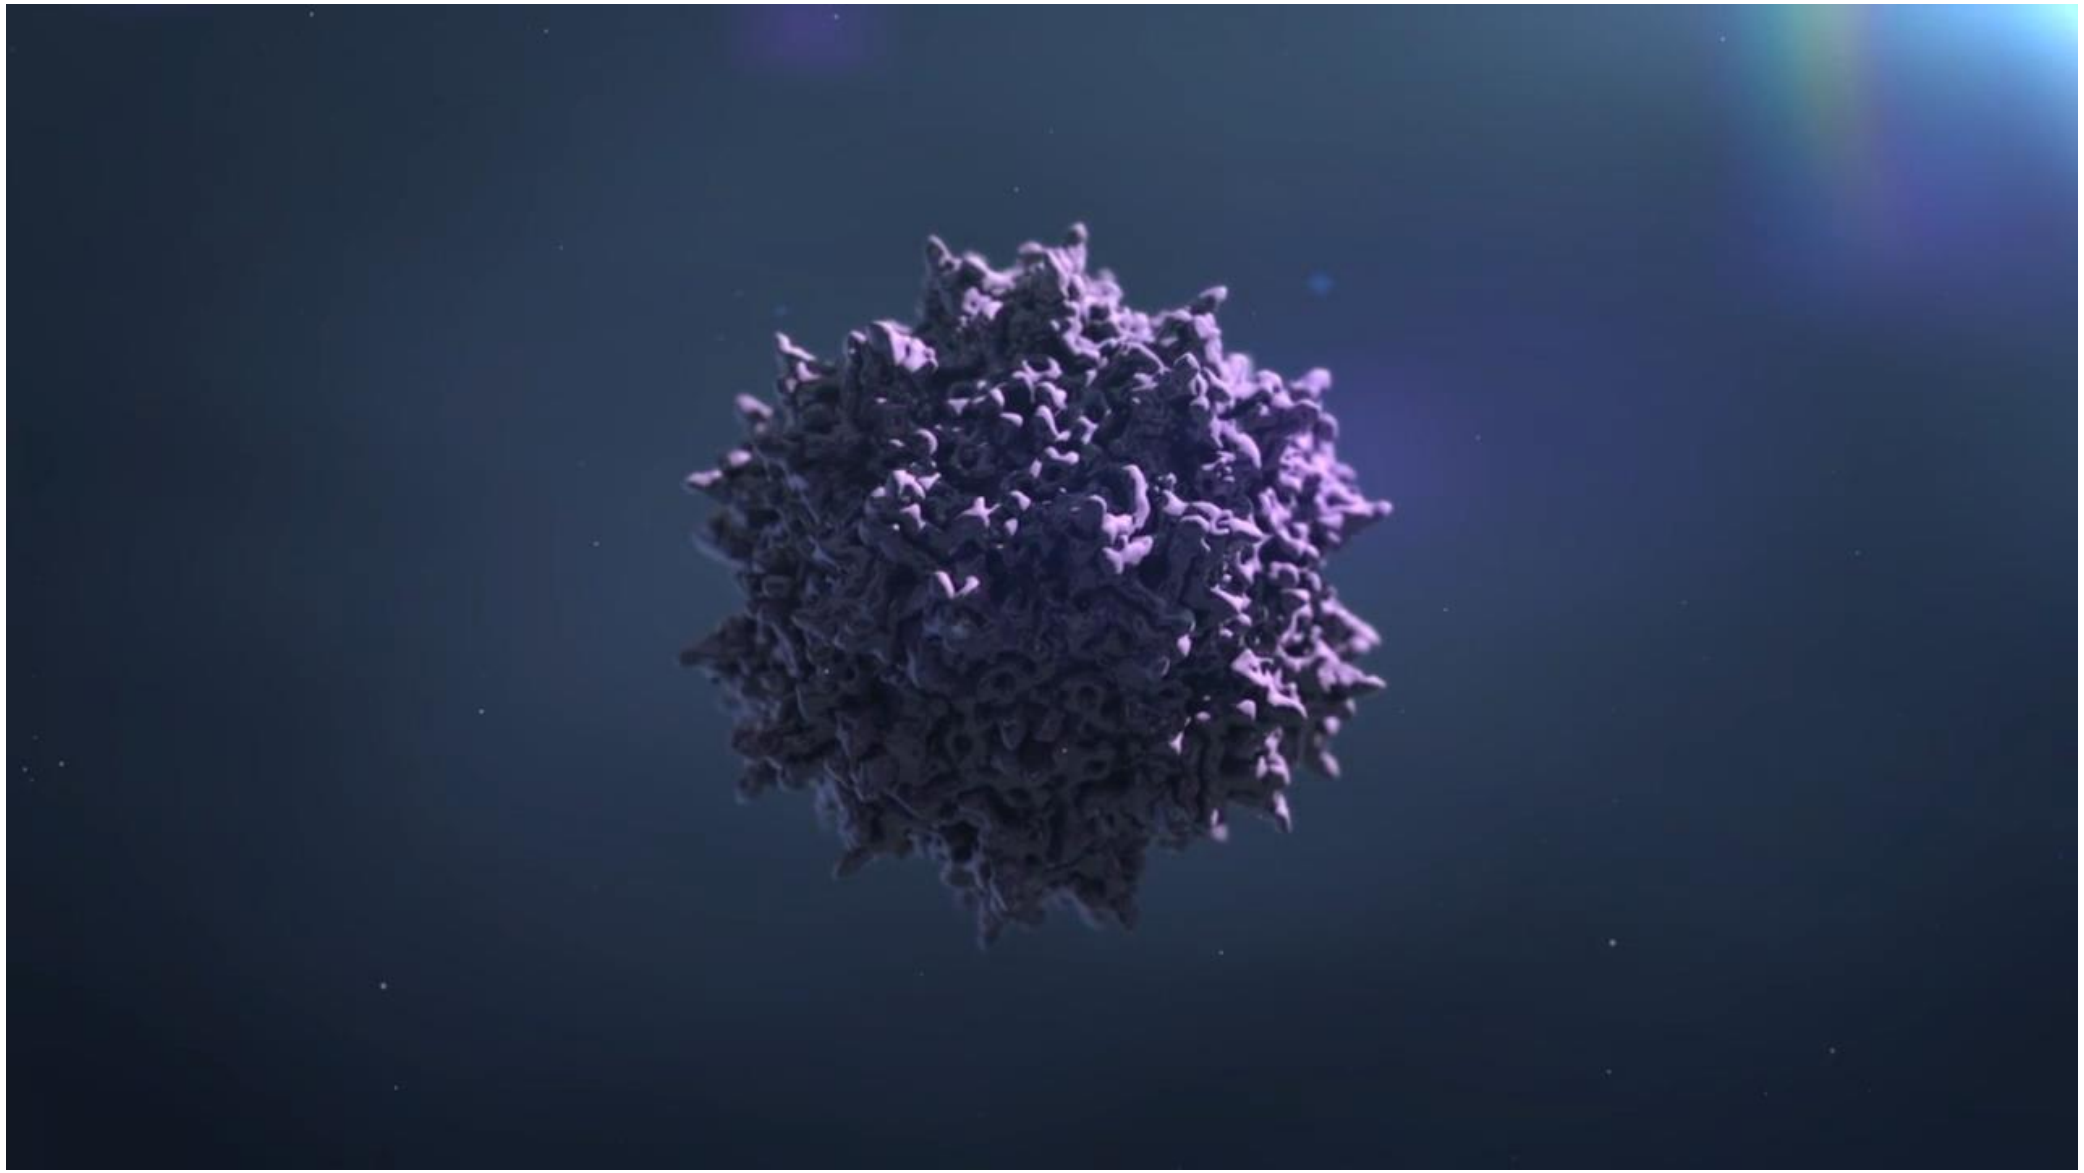
Courtesy of M. Agbandje-McKenna
University of Florida

- Inherently non-pathogenic, unique nature of high-dose therapy
- Many serotypes provide wide range of tissue tropism
- Persists long-term without integration
- Risk vs Benefit in favor of therapeutic benefit

AMERICAN SOCIETY of GENE & CELL THERAPY

NORD National Organization for Rare Disorders

rarediseases.org



Participation in Gene Therapy Clinical Studies

Screening

1) Informed consent
    - Unique nature of gene therapy
    - Clinical features
2) Meet functional criteria
3) Age criteria

Baseline

1) Baseline evaluation
2) Timed function tests
3) Laboratory studies
4) Study schedule established

AMERICAN SOCIETY of GENE & CELL THERAPY

NORD National Organization for Rare Disorders

rarediseases.org

Participation in Gene Therapy Studies

- What preparations or screenings take place?
- Is there genetic counseling?
- Are there any pre-treatments before receiving gene therapy?
- How frequently do the patient and family interact with different members of the treatment team?
- Do they travel long distances?
- How long to they stay?

Who is on the team?

Clinical Study Team

- **Principal Investigator** – responsible for overall study conduct
- **Co-investigators** – other specialists
- **Study Coordinator** – responsible as the manger of all study events
- **Clinical evaluator** – physical therapy
- **Travel coordinator** – manages logistics for patient travel and lodging
- **Study monitor** – external person to review all study data

The Role of Patient Organizations

Patient organizations play many roles in supporting patients and families during their gene therapy journey.

- Data collection to enhance disease understanding and accelerate effective therapies and drug development
- Connect patients treatment centers and specialists
- Connect patients to clinical trials
- Connect patients and caregivers to support programs

AMERICAN SOCIETY of GENE & CELL THERAPY

For those with medical conditions…

- Finding a trial in which to participate
- Finding an expanded access drug
- Finding a center of research for a given condition/intervention

AMERICAN SOCIETY of GENE & CELL THERAPY

NORD National Organization for Rare Disorders

rarediseases.org

For those seeking study results…

- Linkage to PubMed
- Summary results in database
- Results for all pre-specified outcome measures
- Standardized format facilitating comparisons

Row	Saved	Status	Study Title	Conditions	Interventions	Locations
2	☐	Recruiting	Microdystrophin **Gene Transfer** Study in Adolescents and Children With DMD	• **Duchenne Muscular Dystrophy**	• Genetic: SGT-001	• University of Florida Gainesville, Florida, United States • University of Massachusetts Medical School-Worcester Worcester, Massachusetts, United States
3	☐	Recruiting	A Randomized, Double-blind, Placebo-controlled Study of SRP-9001 for **Duchenne Muscular Dystrophy** (DMD)	• **Muscular Dystrophy, Duchenne**	• Drug: SRP-9001 • Drug: Placebo	• David Geffen School of Medicine at UCLA Los Angeles, California, United States • Nationwide Children's Hospital Columbus, Ohio, United States
4	☐	Recruiting	Endomysial Fibrosis, **Muscular** Inflammatory Response and Calcium Homeostasis Dysfunction in **Duchenne Muscular Dystrophy**	• **Duchenne Muscular** Distrophy (DMD)	• Other: Muscle biopsy	• UH Bordeaux Bordeaux, France • UH Lille Lille, France • Montpellier University Hospital Montpellier, France • (and 4 more...)

What are the critical inclusion/exclusion criteria for clinical trials?

Example: Participation in Clinical Studies for Duchenne Muscular Dystrophy

Included

1) Must have Duchenne
   - Defined by mutation
   - Clinical features
2) Meet functional criteria
3) Age criteria

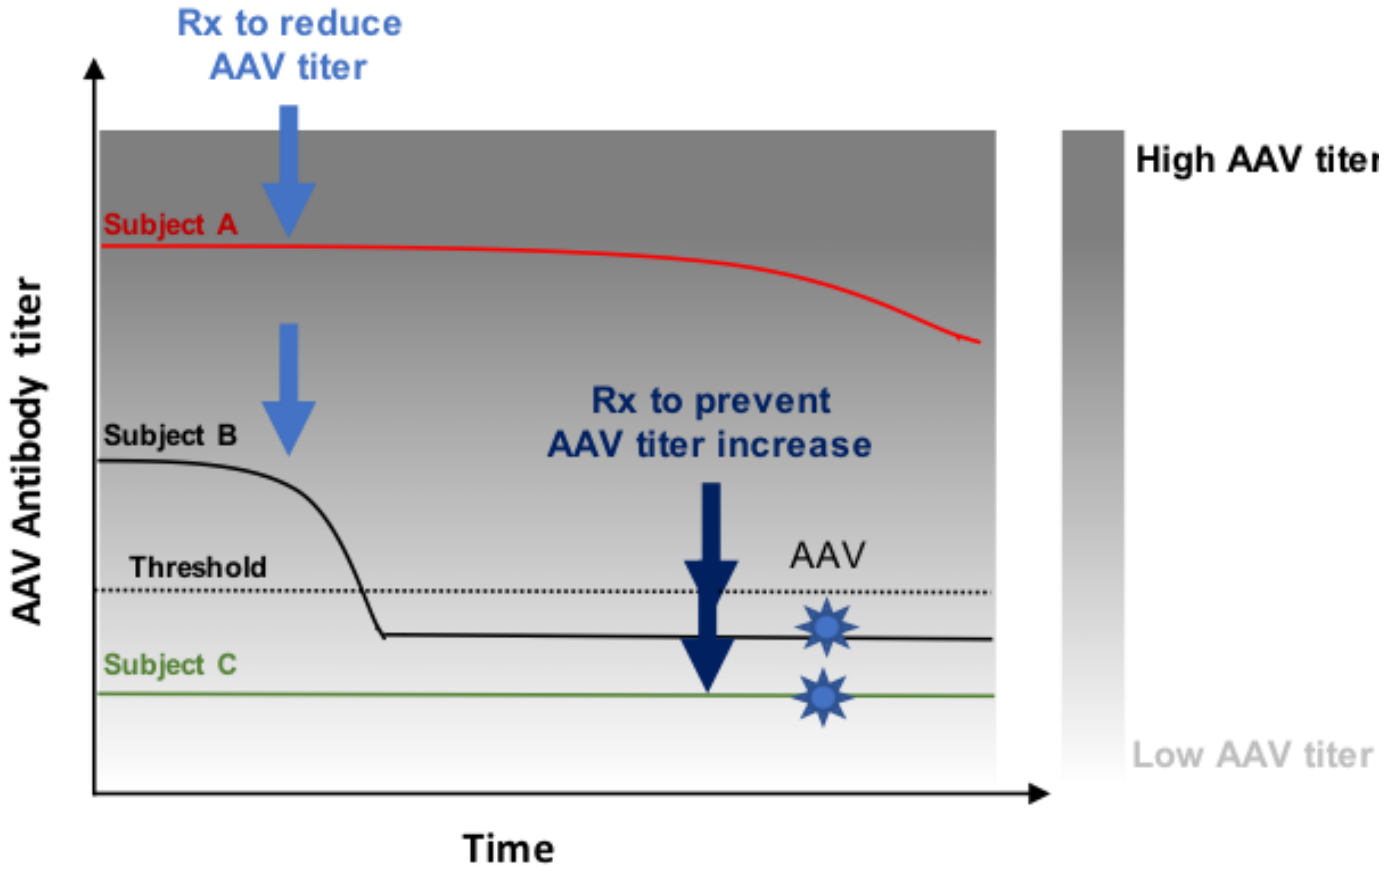
Excluded

1) Ambulatory / functional status
2) Drug therapy – eg, steroids
3) Other study participation
4) AAV exposure status

What are AAV antibodies and why do they matter?

- About **50-60%** of individuals may have prior AAV exposure.
- Preimmunity of AAV is an exclusion criteria for most of studies.

1) Is the threshold used in clinical trials appropriate?
2) What is the most effective immunomodulation regimen to decrease levels of preexisting AAV immunity?
3) What level of preexisting antibody precludes treatment?



AMERICAN SOCIETY of GENE & CELL THERAPY

NORD National Organization for Rare Disorders

rarediseases.org

Is receiving gene therapy durable for the life-span?

AMERICAN SOCIETY of GENE & CELL THERAPY

NORD National Organization for Rare Disorders

rarediseases.org

Is receiving gene therapy durable for the life-span?

MAYBE… but probably NOT!

Early exposure = Less durable

AMERICAN SOCIETY of GENE & CELL THERAPY

NORD National Organization for Rare Disorders

rarediseases.org

Take Home

- Viral vectors can be made in sufficient quantity and quality for registration studies – commercial supply is an ongoing challenge.
- Prevention is required to block antibodies to AAV
- Early exposure = Less durable
  BUT … Primary immune response to AAV can be blocked

Take Home

- Pre-existing antibodies can be treated to allow for AAV gene therapy.
- Gene therapy is associated with side-effects/risk that must be justified with long-term benefit.

Gene delivery to patients at the bedside

Jerry Mendell, MD

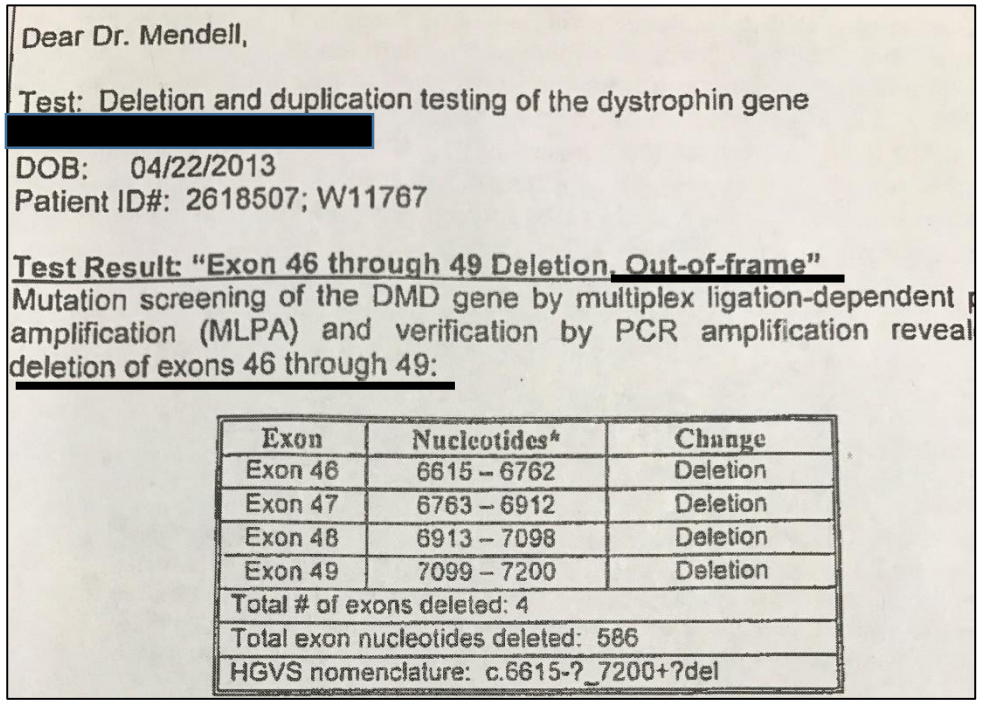
Technology Improved: Gene Delivery through the circulation to reach all muscles



Dear Dr. Mendell,

Test: Deletion and duplication testing of the dystrophin gene

[redacted]

DOB: 04/22/2013
Patient ID#: 2618507; W11767

Test Result: "Exon 46 through 49 Deletion, Out-of-frame"
Mutation screening of the DMD gene by multiplex ligation-dependent p
amplification (MLPA) and verification by PCR amplification reveal
deletion of exons 46 through 49:

Exon	Nucleotides*	Change
Exon 46	6615 – 6762	Deletion
Exon 47	6763 – 6912	Deletion
Exon 48	6913 – 7098	Deletion
Exon 49	7099 – 7200	Deletion
Total # of exons deleted: 4		
Total exon nucleotides deleted: 586		
HGVS nomenclature: c.6615-?_7200+?del		

Critical Steps before Clinical Trial

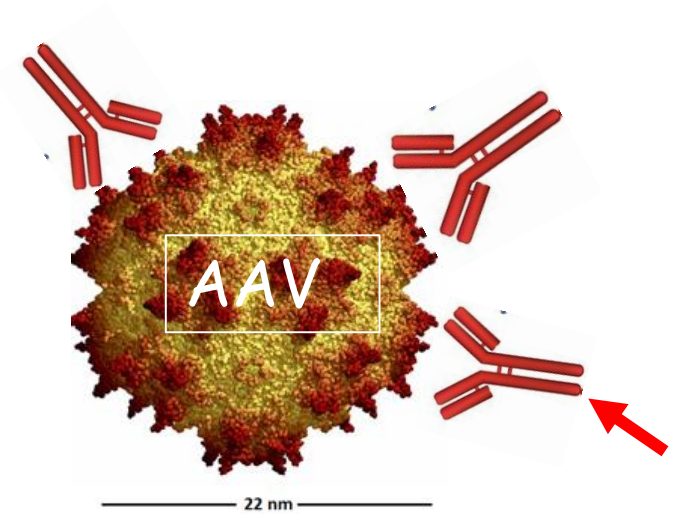
- Confirm the DMD Gene Mutation (or gene mutation for any clinical trial)
- Check for antibodies to AAV

AMERICAN SOCIETY of GENE & CELL THERAPY

NORD National Organization for Rare Disorders

rarediseases.org

Making Sure No Antibody to AAV



Antibody

- Antibody could bind to AAV and block entry to target organ
- Requires a blood test to measure antibodies
- Takes about 4-7 days for lab result
- Must be done for any clinical gene therapy trial

Blood Tests Screened for risk factors for gene delivery
